CT ABDOMEN AND PELVIS

CLINICAL INFO:

TECHNIQUE: 5.0 mm reconstructed images from a scan performed on **Multislice CT** reviewed on workstation using different window and level settings. Post oral and IV contrast CT scan abdomen.

FINDINGS:

Liver has regular margins. There is no focal hepatic mass lesion. Hepatic vessels are normal. Gallbladder and CBD are unremarkable without any radio opaque calculus or biliary dilatation. Pancreas and spleen show normal enhancement without any focal mass lesion.

Bilateral adrenal glands are normal in size. Bilateral kidneys are normal without any radio opaque calculus, mass or hydronephrosis. Urinary bladder and rest of the visualized pelvic viscera appear unremarkable. The stomach, small and large bowel loops show no significant abnormality. There is no significant abdomino-pelvic lymphadenopathy or ascites. Aorta, IVC and rest of the opacified major vessels are patent. Degenerative changes of spine are seen. No definite destructive osseous lesion is seen.

IMPRESSION:

**No significant abnormality seen.
Please correlate clinically.**
